

The smallest of Australia's 2 treekangaroos, the Lumholtz's has a small home range, and thrives in small rainforest pockets. Look for their long tail hanging down - they

Ulysses Butterfly

Electric blue flashes of colour in sunny clearings may be all you see of the Ulysses - when at rest with its wings closed, it is a drab brown! Ulysses have a wingspan of up to 14cm.

Lumholtz's Tree-kangaroo

Look out for the helpful information signs along your walk. Discover the traditional ways of the Ngadjon people, or ask about our children's Tree Roo Trail at the Visitor

Walk and Learn

The male Tooth billed Bowerbird makes a stage to attract a mate, decorating a cleared area with upturned leaves. It has a wide range of songs and sounds including mimicry of other

Tooth-billed Bowerbird

The Stinging Tree has stems, leaves & fruit with tiny silica hairs which can be very painful if touched. Look out for large, heart-shaped leaves with segrated edges and serrated edges and avoid them!

The colourful red and yellow flowers of the Black Bean are distinctive during the summer flowering season. Long pods contain toxic seeds which were an important traditional

food for the local aboriginal people

CONSERVATION PAI

Bumpy Satinash

Stay on the track

Don't feed the animals Everything is protected

Take care - especially in wet weather Do not eat rainforest fruits

Allow 30 - 40 minutes for each walk

Safety in the Rainforest:

Caring for the Rainforest:

Amethystine Python

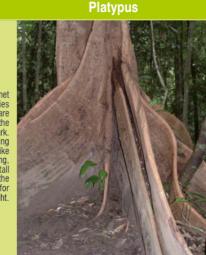

his huge snake, also known as the scrub python, is not venomous but is large enough to catch and eat our rainforest wallabies! The pythons may occasionally be seen basking in the sun on winter days.

This egg-laying, billed mammal baffled early naturalists Only 40-50cm in length, the shy platypus is best seen in the river at dawn and dusk, or in the pool below the

Many species of weird and amazingly shaped fungi occur in the forest, and some can be the source of unusual odours! Look out for the pictured Wedding Vail Europa

Prized as a cabinet timber, three species of tulip oak are protected in the Conservation Park. Look for the amazing rocket-like buttressing, supporting the tall straight trunk, as the trees scramble for light.

Also known as lawyer cane or rattan, these native scrambling palms have curved spines which can entangle the unwary walker. If caught, stand still and unhook the spines carefully.

Tulip Oak

Listen for the distinctive whip-crack call of the male whipbird and the quieter female reply. Look for them rustling on the ground searching for insects. They are easier heard than seen

Eastern Whipbird

Ferocious looking when attacked, The Boyd's Forest Dragon the back of its neck in self defence. The dragon has the ability to camouflage itself.
