Beef Cattle display and Introduction

Barnwell Myola

And our selection of the Beef Cattle we are breeding for various markets.

In our first Pen we have our Red Angus Cattle, which are bred to supply our top end restaurants and domestic trade. We have developed this breed by crossing our Brahman herd with Red Angus/ Senepol cross Bulls. The animal we are then processing will have excellent flavour and exceptional eating quality. We called them KUR-Red.

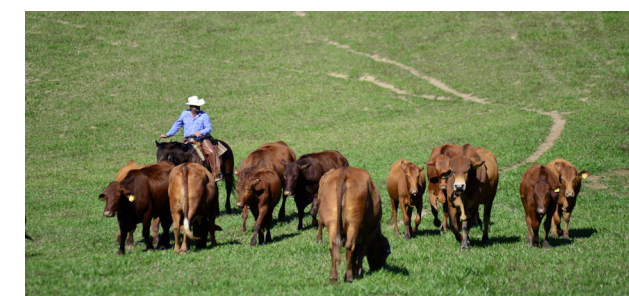

Pen 2. We have our Export Brahman Cattle. These steers will be raised for export to China for our standard KUR-Cow Beef. As you can see they are exceptionally quiet and well proportioned for good yield and extremely capable of handling ticks and heat when exported.

Pen 3. You will notice our Wagyu Cattle, which we have just begun to breed. **Our main blood lines will be Mitcheffuku, the best yielding Wagyu in the world.** We will use these cattle to supply our restaurant trade and selected export destinations. We will be processing the progeny next year and hope to have our Kur- Pearl Wagyu regd. At that Time.

Pen 4. Here you will see our French Charolais. These cows will give us again Restaurant quality Beef for local and Export Markets. Charolais Cattle have genetic traits that gives us greater bones structure which in turn allows our cattle to carry extra weight through to Processing. We will keep our Charolais Heifers and form a composite breed Called KUR REDS.

Thank You for Your Attention.
